

Telematics and video analysis

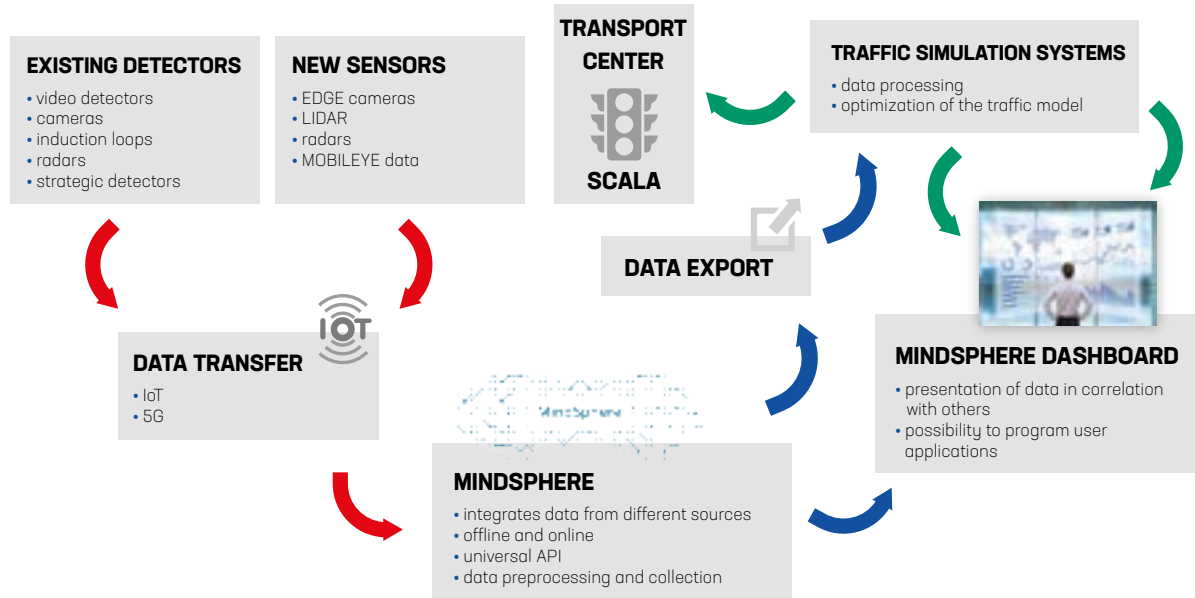

Make decisions and plan based on real data

Do you need to know the volume of traffic or intersections? Schedule road closures? You don't know what technologies to choose and you have difficulties with financing or applying for subsidies and many others?

We have a solution for you

- **WE PROCESS** a business analysis to define your problem
- **WE PROPOSE** several variants of the solution, including implementation
- **WE SAVE** time and money by making the most of existing equipment and studying the market (preventing the purchase of unsuitable technology, comparing products)
- **WE SUPPLY** data in the form of simple statistics and graphs that will help you plan correctly and can also serve as a basis for subsidies
- **WE PROVIDE** financing (processing of documents for the grant application) and sufficient human resources (experts and capacities)

Overview solution architecture

Collection of data from the system

Sample of data collection from the deployed system in the Chytrá Evropská project.

Screenshots from the system with parameters

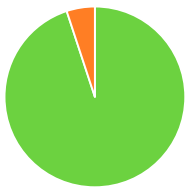

Measurement of the number of passes by vehicle category
